

MAGIC LOCK INSTALLATION INSTRUCTIONS #1503

Items included:

Items you need to complete your installation: pencil, paper towels, alcohol. Optional items: drill, 1/16" drill bit, #1 Phillips screwdriver.

To Install

1. Separate key from key holder.

Determine placement of magnetic lock. Make sure cabinet handle doesn't interfere with placement.

Using paper towels and alcohol clean the surfaces where the lock and catch will be mounted.

2. Put lock into installation tool. Remove paper backing from adhesive strip on the installation tool and lock. You may need to use replacement adhesive strips for installing additional locks. One strip may be placed on top of another.

3. Mount installation tool in position you determined in Step 1.

4. Place a pencil mark on the cabinet frame at each edge of the installation tool. This is where the catch will mount.

5. Gently close the cabinet door/drawer and the magnetic lock will transfer from the installation tool to the door/drawer.

6. Push up on locking arm. This allows the locking arm to move up and down and engages the locking mechanism. When the locking arm is in the down

position this disengages the lock and allows cabinet door to open and close freely.

7. Test lock operation with the magnetic key.

8. Install catch where previously marked (in Step 4). Install the optional screws for the catch. This is recommended for the most secure installation.

Once proper operation of lock is confirmed push firmly on lock and catch to secure adhesive. Please allow 24 hours for adhesive to set.

Troubleshooting

If latch fails to transfer to cabinet door/drawer it could be either that installation tool needs to be moved slightly outward or that the cabinet door/drawer may have bumper pads which may have to be removed.

Note: This product is designed to help minimize accidents. Use of this product is not a substitute for adult supervision.

MAGIC LOCK INSTALLATION INSTRUCTIONS #1503

Instructions for Mounting on Cabinet Drawers

Lock can be mounted either horizontally (A) or vertically (B).

Horizontal mounting

Vertical mounting

For horizontal mounting:
You will need a minimum of 1 3/4" space between the drawer frame and drawer box. (C)

For vertical mounting:
You will need a minimum of 2" space between the drawer frame and drawer box. (C)

Measure distance between drawer frame and drawer box to determine mounting position.

If the space between the drawer frame and drawer box is less than 7/8" you can mount the lock in the vertical position to the inside of the drawer box (D).

IMPORTANT: This lock cannot be used on drawers if the space between the drawer frame and drawer box is between 7/8" and 1 3/4" (E).

Measure distance between drawer frame and drawer box to determine if lock can be used.
