

# DRIVEWAY SAFETY NET MODEL 4800/4830

## INSTALLATION AND USE INSTRUCTIONS

**IMPORTANT NOTICE:** Driveway Net is **NOT** intended to be used as a swimming pool barrier or a gate.

### Determine location of Driveway Safety Net along driveway.

1. Using hammer and block of wood, hammer the first ground sleeve into the ground. Be sure ground sleeve goes straight into the ground. If the ground is soft, it may require that the ground sleeve lean slightly outward away from the driveway. This will allow the net pole to stand up straight when the net is stretched tight.
2. With the 1<sup>st</sup> ground sleeve in place, place the net pole with net into the ground sleeve. *(If the ground sleeve has filled partially with dirt during the installation, pull sleeve out of ground, tap on driveway to remove dirt and reinstall. Be sure ground sleeves are flush with ground when fully installed.)*
3. Stretch the net across the driveway.
4. With net pulled tight enough to stand up straight; mark the location where the 2<sup>nd</sup> net pole rests on ground.
5. Hammer the 2<sup>nd</sup> ground sleeve into the ground approximately 2 inches away from the marked location of the 2<sup>nd</sup> pole. *(Moving the ground sleeve out 2 inches will ensure that the net is tight when installed.)*
6. Place 2<sup>nd</sup> net pole with net into ground. Slide the net up or down on the poles until the net gently rests on the driveway. *(This will help ensure that rolling balls will be stopped by the net.)*

**Removal and Storage:** When removing net for storage, place the black vinyl caps over the ground sleeves to keep out dirt and water. With ground sleeves flush with the ground, there is no need to remove them. They will not interfere with grass mowing. It is recommended that the net be rolled up around one of the poles and stored in the shipping box.

**Helpful Hints:** Should the net start to sag over time, remove one of the ground sleeves and move it out slightly from the driveway and reinstall.

**Please remember:** This product has been designed only as a visual barrier. It is not intended to be a physical barrier to hold children. Adult supervision is always required when young children play near road!
